Jim White has an MPA and a Bachelor of Science from the University of Utah. He has spent the past 25 years working with Science and technology students to teach them how to get into the best jobs and internships worldwide. He works with students from across a wide spectrum of scientific fields. He has helped hundreds of University of Utah students gain employment with outstanding employers which include NASA, the US National Research Institutes, several National Laboratories including Los Alamos, Sandia, Oak Ridge, Lawrence Livermore, INEL, and many government departments including the Department of Energy. He has had the opportunity to visit with several top nuclear engineers at the “Annular Core” research reactor at Sandia Labs outside Albuquerque. He has been invited on back hall tours of the White House and Pentagon, visited technology firms, defense contractors and military bases nation-wide where he has had the privilege of seeing some of the newest cutting edge energy development and “Star-Wars” technologies while promoting the best and brightest from the University of Utah.

Beyond his enjoyment of helping our students and graduates get into interesting and fulfilling careers, he is an expert teaching students how to find the job-openings, networking, writing vitas, and how to prepare for technical interviews. He knows the intricacies of the technical job search and the tripping points in the government hiring systems. Jim does frequent workshops on getting into government jobs.
Jim’s wife Sally also works in the nuclear power industry, for Devon Way a software solutions company that has worked almost exclusively with nuclear power industry. She sells next-generation software to nuclear power plants worldwide. Jim and Sally enjoy running rivers, antique collecting, and hiking in the canyons and byways of Utah. Jim designed his own log home in Summit County where he and Sally live with their full-blooded wolf, Echo.

... and he will be talking about initiating your career in the power industry.
